

Mail to Dr. Bindu — Review-II

Four lines. Plain words. No jargon she has to unpack, and no number that is not on a slide in the deck.

Subject: Review-II — GaN gate driver, work done so far

Ma'am,

The converter and the improved gate driver are both built and simulated. We used **ngspice** to run every simulation and **KiCad** to draw every schematic from the same netlist ngspice runs, so the drawing and the simulation cannot disagree. The crosstalk fault is reproduced and fixed — the off-state gate margin goes from -0.249 V to $+2.576\text{ V}$. The review deck is attached, and every number in it can be re-run on request.

Regards,

Amritha S · Sanjay Kumar · Aamir Abdullah

If she asks for it as plain text to paste
